

Clinical Consultation Report

Patient ID: CLN-2026-001

Age: 45 | Sex: Male

Chief Complaint

Persistent cough and mild shortness of breath for 2 weeks.

History of Present Illness

Patient reports a dry cough worsening at night. No chest pain. Occasional fatigue.

Physical Examination

Temperature: 37.2°C, BP: 128/82 mmHg, HR: 78 bpm, SpO2: 97%.

Assessment

Likely viral upper respiratory tract infection with post-viral cough.

Plan

Hydration, symptomatic treatment, follow-up in 2 weeks if symptoms persist.
